

About us (publicai.co/about)

The Public AI Inference Utility is a nonprofit, open-source project. We build products and organize advocacy to support the work of public AI model builders like the Swiss AI Initiative, AI Singapore, AI Sweden, and the Barcelona Supercomputing Center.

[team.jpg]

Our mission is to build public AI. To ensure that AI benefits everyone.

Our team is fiscally sponsored by [Metagov](#) and funded by Mozilla, the Future of Life Institute, and the Center for Cultural Innovation.

We are part of the global [movement for public AI](#).

Consider [joining us](#) or supporting our work [with a donation](#).

Quote wall

“We’re three toddlers in a trench coat, and that is awesome!” - [Katherine](#)

“Okay, why don’t we just build this [feature/product/startup] in the next hour?” - [Josh](#)

“... who built this? 😞” - [Jenny](#)

[While demoing the frontend] “Oh, I’m actually on a run right now.” - Joseph

“Is this like ChatGPT but vegan/fairtrade/organic?” - [Nick](#)

“Eat some shit, I love you.” - [Alex](#)

“We’re the best supporting actress for Swiss AI’s launch, and that can be a luxury.” - [Katherine](#)

Contributing (publicai.co/contributing)

First off, thank you for considering contributing to our project!

The Public AI Inference Utility is the world's first public inference infrastructure for large-scale, sovereign AI models like Apertus. It's part of a global effort to turn AI into a form of public infrastructure like highways, water, or electricity.

We welcome contributors from around the world, whether you're a developer, designer, researcher, policymaker, organizer, or just curious.

Start here:

- If you have an issue with the site, fill out an issue in our GitHub.
- If you want to contribute in other ways, drop a CV or bio into our 30-second contributing form: [I want to contribute](#)
